Programming Logic

The Art Institute - GWDA123

Assignment 1   Using the pages provided, mark up and style each document with HTML and CSS. For each page, add an image that illustrates that particular selector type. Float each image either left or right, and control the runaround using margins.

You can get creative with images - they do not have to be literal representations, but they should reflect the idea of that selector type (e.g. many types of cats for tag, a set of cats for class, and a unique cat for ID).

Be sure to link up all of your pages using document relative paths like we did in class.

HTML & CSS	Once again practicing HTML & CSS over 3 documents. Be sure to center your layout using the margin auto left and right technique.	40pts
Floated Images	One floated Illustration per page. Manage the runaround using margins.	30pts
Linked Documents	Link all three documents using a persistent navigation.	30pts

8% of final grade, **Total:**   **100pts**
